*Examiner's Amendment*

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard O'Planick on March 17, 2005.

The application has been amended as follows:

In the claims

claim 1 line 5, to correct a typographical error, "a width W" has been changed to -- having a width w -- (specification paragraph 0027);

claim 3, at the end the improper comma has been changed to a period;

the unnumbered claim after claim 3 has been renumbered as claim 4;

claim 4 has been renumbered as claim 5;

claim 5 line 2, to define M as in claim 4, after "M," has been inserted -- the tire perimeter measured at the tire centerline, -- .

In the abstract

The abstract has been rewritten as set forth below in order to limit the abstract to the required 150 words or less.

Abstract

A tire [10] has an outer tread and an inner casing with] has a belt structure [16, 17], the belt structure includes an overlay ply [18, 30, 60] reinforced by parallel cords oriented circumferentially [having a width W between lateral outermost edges], the overlay ply [18, 30, 60] having a pattern of cuts [22] within discrete segments [19]. Each segment [19] has a repeated pattern of cuts [22] arranged in six rows  $R_1$ - $R_6$ . Each cut [22] is spaced at least 100 mm from a cut in an adjacent row and is laterally offset from an adjacent cut by at least 3 mm, this distance being smaller than the cut width to ensure that each overlay cord is cut. The overlay cord lengths within the respective rows is of any length [L] in the range of 200 to 500 mm. The cut pitch within the respective rows is of any percentage [P] of the tire circumference in the range of 8 to 30%. The circumferential offset between two adjacent segments [19] is of any percentage [O] of the tire circumference in the range of 0.5 to 2%. [The cut pattern of the preferred embodiment of the invention has the cut pattern arranged in the six rows of 0, 53, 21, 89, 34, and 72 percent respectively of the cut pitch P of the cord relative to row  $R_1$  and repeated within each row with the cut length P, wherein the cut pitch percentage P is 20.9%. The circumferential offset O between two adjacent segments 19, expressed in percentage of M, is 1.16%. The overlay cord length L is defined by  $L=P*M$  where M is the tire perimeter measured at the tire centerline in millimeter.]

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adrienne C. Johnstone whose telephone number is (571)272-1218. The examiner can normally be reached on Monday-Friday, 10:30AM-7:00PM.
